

# Semine

Open position

# Data Engineer

# Are you our Data Engineer?

Semine is a tech company that uses artificial intelligence to automate financial functions for companies. The company was founded in Norway in 2015 to overcome the gap between people and technology to remove repetitive tasks. Using artificial intelligence (AI), a team of user experience experts created what would become SEMINE - a solution for fully automated accounting. Semine uses self-developed AI technology and has created a hyper-automation platform for the past seven years with an end-to-end solution for handling incoming invoices. Semine has experienced enormous growth and interest from leading Nordic companies in last three years. Today, we have over fifty employees spread over offices in Norway, Sweden, and Finland. Semine also has a fully owned subsidiary in India.

Semine today has a leading market position in Norway and is now focusing on the global market with international customers. The next step is to expand the company outside Norway's borders, and during 2023-24 Semine have opened an office in Stockholm and Helsinki. In other words, you will join a company with solid growth with excellent development opportunities!

Semine uses agile methodology and Microsoft technologies in software development. We have an open and transparent working environment.

## Responsibilities

- Create and maintain the data infrastructure.
- Choose appropriate technologies for data storage, processing, and analysis.
- Build and optimize data pipelines.
- Develop and maintain ETL (Extract, Transform, Load) processes.
